Who we are

We're Gladstone-based and serve regional QLD SMEs—from Bundaberg to Townsville, Banana to Isaac, and everywhere in between.

Aethiro is built by an engineer with over a decade of hands-on industry experience, working alongside SMEs and on major contracts. We know what it's like to operate in regional Queensland—high costs, staff shortages, transport headaches, and constant tender pressure.

Not regular consultants—we roll up our sleeves and work with you, onsite and in plain English.

What we do

For Regional SMEs

Carbon Accounting

We measure your business's emissions from fuel, electricity, and operations—helping you track, manage, and reduce your carbon footprint (and start saving on energy bills).

Save on Fuel & Energy

We don't just measure; we help you action an emissions reduction plan, so you start seeing cost savings sooner.

ESG Readiness for Contracts

We break down new ESG and climate reporting requirements, so you know exactly what's expected in tenders and contracts. When the big end of town asks you for data, you'll be ready.

Tender-Ready Carbon Snapshot™

Most new tenders require a carbon footprint—ours is a simple, credible summary you can attach to contracts and proposals, built for regional SMEs.

ISO 14001 Gap Analysis

We help you get ready for environmental audits—identifying gaps and preparing you to meet ISO 14001 standards, stress-free.

Climate Risk Preparedness

We arm your business with data and documentation to prove your climate readiness. When severe weather hits, you'll have the evidence and planning to minimise disruption, impress insurers, and meet client expectations.

For Larger Companies

Facility-level Carbon Footprint Verification & Measurement

As certified GHG Lead Verifier (ISO 14064-1, 2 & 3), we develop GHG inventories, set up robust systems, and verify your data—so you can report with confidence for tenders, compliance, or internal targets.

Procurement Upskilling

We upskill your procurement team to understand carbon data in contracts, so you avoid unexpected carbon offset costs.

ASIC Sustainability Reporting Support

We help you prepare for ASIC's climate reporting—developing strategies, assessing climate risks, and setting targets under the AASB S2 framework.

For Business Chambers, Alliances, & Councils

We run workshops on carbon accounting, climate risk preparedness, and tender/ESG readiness—tailored for your members and community.

How We're Different

Regional focus, based in Gladstone—onsite delivery, no extra travel costs

13 years' heavy industry and chemical engineering experience

We automate the data grind—so you get cost savings and performance insights, not paperwork

Fast, flexible, and personal—no city-based delays or jargon

Onsite data collection included – accurate inventories, not estimates

Tender-ready emissions summaries for contracts and bids

Sustainability expertise on call – without adding headcount

Predictable pricing – fixed-cost updates, monthly or quarterly

Qualified – ISO 14001 certified, ISO 14064 trained, GHG accounting professional

Our Commitment

‘Carbon Made Simple’ – no jargon, just real solutions

Fully insured with public liability and professional indemnity insurances

Data privacy and client confidentiality as standard
